

Study Space Legal Package

00 Study Space Legal Risk Assessment

STUDY SPACE

Legal Risk Assessment

Study Space repository and contributor-risk review

Field	Details
Version	0.1
Draft date	2026-07-14
Prepared for	Founder review and qualified attorney review
Status	Attorney-review draft only; not final legal advice; not ready for signature until reviewed and approved by qualified counsel.

Important Notice

This draft package is a project-specific working draft prepared for review, amendment, and approval by qualified legal counsel. It is not legal advice, does not create an attorney-client relationship, and should not be signed or relied upon until counsel confirms suitability for the governing law, facts, parties, and commercial plan.

Revision History

Version	Date	Description	Author
0.1	2026-07-14	Initial project-specific attorney-review draft generated from inspected Study Space repository and founder instructions.	Drafting assistant

2. Main Terms
3. Project-Specific Provisions
4. Schedules and Appendices
5. Signature Pages
6. Legal Review Notes

Executive Summary

Study Space is a privately owned Flask-based student productivity platform with significant future commercial ambition. The highest-priority legal risks are not unusual for an early software project, but they should be addressed before broader collaborator access, user onboarding, external integrations, or commercialization.

Severity	Risk	Why It Matters
Critical	No signed contributor/IP/confidentiality package yet	Two volunteer co-developers may receive repository access. Without signed terms, ownership and confidentiality may become disputed.
High	No standalone project license file	Repository lacks a clear inbound/outbound licensing posture. Public repository access may create ambiguity.
High	Remote repository name mismatch	Observed Git remote references Flower-world, not Study Space. This can create chain-of-title, brand, and repository-control confusion.
High	Student/global privacy scope	Future users may include minors, students, international users, AI interactions, chat, files, and educational records.
Medium	Dependency version mismatch	requirements.txt and locally observed dependency versions differ for several packages; license notices and security scanning should use locked dependencies.
Medium	Future compensation expectations	Volunteers may expect upside. Objective written compensation terms are needed before contributions begin.

Repository and Architecture Observations

1. The app is modularized into route blueprints, services, models, migrations, tests, templates, static assets, README, and SECURITY documentation.
2. Security controls include CSRF, rate limiting, Talisman/CSP, password strength rules, token hashing, SMTP-ready account flows, security event logging, MIME/signature image validation, PDF URL allowlisting, and account export/deletion.
3. Database structure includes users, user profiles, user settings, security events, notes, tasks, events, study sessions, flashcards, groups, posts, comments, likes, notifications, and achievements.
4. SQLite is used locally with PostgreSQL-compatible configuration, but production deployment should use PostgreSQL and a backup/retention policy.
5. There is no observed LICENSE file. Procfile and Waitress suggest deployment intent, but deployment terms and hosting provider contracts are not yet documented.

Intellectual Property Risks

1. Volunteer code contributions must be assigned or licensed to the Founder/Project; otherwise ownership can become fragmented.
2. Pre-existing IP, code snippets, AI-generated content, and third-party copied code need explicit disclosure and approval.
3. Brand assets, logos, names, UI design, database schemas, prompts, and documentation should be expressly included in IP assignment.

Repository and Developer Risks

1. Repository access should require MFA, least privilege, branch protection, pull requests, review, and immediate offboarding procedures.
2. No contributor should use personal secrets, unapproved packages, or direct production credentials.
3. The GitHub remote name mismatch should be corrected or documented before legal package execution.

Open Source Risks

1. Most dependencies appear permissive, but psycopg[binary], Waitress, Redis package metadata, and observed version mismatches require verification.
2. A dependency notice file and approval workflow are needed before distribution or commercial release.
3. Copyleft, AGPL, source-available, model, dataset, and icon/font licenses should require written approval.

Privacy and Data Risks

1. Study Space may process student data, minors' data, authentication data, private notes, chat, files, AI prompts, logs, and integrations.
2. Privacy policy, terms of use, data processing addendum, retention/deletion policy, child/minor consent posture, and AI provider disclosures are needed before launch.
3. Security event logs should avoid secrets and raw user content; retention should be defined.

Commercialization Risks

1. Volunteer contributors should have no implied employment, wage, equity, partnership, or guaranteed compensation claims.
2. If future revenue, acquisition, licensing, or monetization occurs, compensation mechanisms must be objective, capped where appropriate, and approved in writing.
3. Founder control should be documented consistently across governance, IP, repository, and compensation documents.

Recommended Additional Documents

- Public Terms of Service and Privacy Policy before user launch.
- Data Processing Addendum for institutional customers or processors.
- Acceptable Use Policy and Community Guidelines before public/community/chat features scale.
- AI Use Policy and AI Provider Addendum before external AI integrations.
- Trademark clearance and brand assignment/usage policy.
- Incident Response Plan and Data Breach Notification Playbook.

Schedule 1 - Project Snapshot

Topic	Observed Study Space Detail
Project	Study Space
Founder	[Founder Legal Name]
Current owner statement	The Founder is the intended project owner, repository administrator, lead architect, final decision maker, and commercial decision maker unless changed by a signed written agreement.
Repository	Local project at C:\Users\ewanb\OneDrive\Desktop\All MY SH!T\Study Room; current Git remote observed as https://github.com/Deadking1i1/Flower-world.git .
Stack	Python Flask application with Jinja templates, SQLAlchemy models, Flask-Migrate/Alembic migrations, SQLite for local development, PostgreSQL-compatible configuration path, Waitress/Procfile deployment path, Redis-compatible rate-limit storage.

Topic	Observed Study Space Detail
Features	User accounts, profiles, settings, notes, tasks, events, study sessions, flashcards, groups, feed, notifications, assistant summarization, PDF embedding with domain allowlist, SMTP-ready email verification/reset/change flows, security event logging, account export and deletion.
Documentation	README.md, SECURITY.md, .env.example, tests, migrations, and modular route/model/service files are present. No standalone LICENSE file was observed.
Validation	At inspection, tests passed and migration head was f7a9b1c3d5e6.

Schedule 2 - Current Technical Modules

Module	Observed Status
Authentication	Registration, login, logout, password change, password reset, email verification, email change, security events.
Dashboard/Hub	Dashboard summaries, study hub, quick notes, events, PDF embedding by allowlist, placeholder Spotify connection.
Notes/Tasks	Notes hub, notes, task planner, state transitions, pagination, ownership checks.
Study Tools	Timer, study sessions, flashcards, assistant summarization.
Community	Groups, feed, posts/comments model, public notes/flashcards.
Account/Privacy	Profile, settings, export, deletion, security history, normalized UserProfile/UserSettings.

Legal Review Notes

1. Confirm governing law and contributor location; volunteer status and IP assignment rules vary materially by jurisdiction.
2. Confirm whether any contributor is a minor; if so, guardian consent may be required.
3. Confirm whether repository remains private or becomes public; outbound license strategy changes risk profile.
4. Resolve dependency license verification and project license/no-license posture before distribution.
